

Pressure Controller 8042

GS 3 series, DN 15 up to DN 150

Pneumatic controller for continuous and discontinuous pressure control of gases and steam.

- High dynamic and control quality
- External or manual set point setting
- Compact and simple design of valve as well as of controller
- Lowest possible weight

Technical Information

Valve

Body design	Flangeless, wafer-type construction more versions see on data-sheet 8042-GS1		
Nominal sizes	DN 15 up to DN 150		
Nominal pressure acc. DIN 2401 for flanges with facing type B	PN 40 (fitting for PN 10-25)	DN 15 - DN 150	
Nominal pressure acc. ANSI for flanges acc. ASME B16.5 RF	ANSI 150	DN 15 - DN 150	
	ANSI 300	DN 15 - DN 150	
Nominal pressure acc. JIS for „raised face“ flanges	10K	DN 15 - DN 50	
	20K	DN 15 - DN 40	
Fluid temperature	Versions from -60°C up to +230°C		
Leakage	Disc pair Carbon-stainless steel	Disc pair SFC	Disc pair STN 2
% of Kvs	< 0,0001	< 0,0005	< 0,001
IEC 60534-4	IV-S1	IV-S1	IV
EN 12266-1	D	E	E
Packing leakage	tested according to TA-Luft as defined in DIN EN ISO 15848-1 and VDI 2440		

Controller

Control pressure ranges	0,05 - 1 bar (remote operation) 0,5 - 6 bar (remote operation) 0,5 - 2,5 bar (manual operation)
Supply pressure	4 - 6 bar
Temperature range for diaphragm system	60 °C, maximum

Fluid temperature

Rating	PN40	PN 16	PN 100	ANSI 150	ANSI 300	ANSI 600

Tmin [°C]	-60	-60	-10	-20	-20	-20
Tmax [°C]	230	230	230	230	230	230

Function

The steam or gas pressure from the installation (pressure chamber or pipe) is applied to the controller's diaphragm and compared to the set point signal. As a result of this comparison, supply air is either delivered to the actuator or exhausted. Consequently valve position and flow change, as well as the controlled pressure. The controller can be used for non-continuous processes with varying set points as well as for continuous pressure control (e.g. pressure reduction of steam). Examples can be found at the end of this brochure.

Remark: This proportional controller has a high internal gain and might not replace a conventional control loop with considerable dead times. Practical experience, however, indicates that many different pressure control loops can be handled with this system. To reduce the application risk prior to installation we recommend factory consultation, which is in any case worthwhile due to the potential cost reduction (no pressure gauge and process controller required).

Application Examples

Pressure control in a closed chamber:

The pressure in a steam vessel is to be controlled in accordance with a varying set point signal, which is a current signal determined by the process controller (e.g. a CPS). This signal first is converted to a pressure signal by an i/p-converter and then fed to the pressure controller type 8042. The actual steam pressure is picked up via a pilot line which at the same time takes care of cooling down the medium before it gets into contact with the controller's diaphragm system.

Steam pressure reduction in an energy supply line:

The pressure in a steam supply installation is to be maintained constant in spite of varying flow and upstream pressure. Due to the controller's high dynamic the sketched solution can be used in case of rapidly and strongly changing flows.

Materials

Valve

Body	stainless steel 1.4581 or 1.4404 /1.4408	carbon steel 1.0619 or 1.0570
Head section	stainless steel 1.4571	carbon steel 1.0570
Bonnet	brass, chrome plated, for actuator 125 mm: aluminium, corrosion protected	
Packing	PTFE, carbon filled	
Actuating stem	stainless steel 1.4571, roller burnished	
Fixed disc	stainless steel covered	STN 2
Sliding disc	special carbon material	SFC
coupling ring for sliding disc	stainless steel 1.4581	STN 2

Controller

Body	brass, chrome plated
------	----------------------

Admissible differential pressures

(For temperatures of up to 120°C with PN-rating
up to 38°C with ANSI-rating)

**For temperatures of 120°C (PN)
or 38°C (ANSI) and above:
obey application limits !**

Disc-pair: Carbon - stainless steel coated

Application limitations for GS3 valves in stainless steel

These pressure must not be exceeded for GS-valves from the GS3-series made of stainless steel, even though the actuator power might allow it.
